Target Entity:Medical hospital

Framework: NCA ECC (Essential Cybersecurity Controls – 2024

This report presents a high level compliance and gap analysis for Medical hospital against the National Cybersecurity Authority's Essential Cybersecurity Controls (NCA ECC-2-2024). The objective is to identify security gaps in access control and data protection and provide actionable remediation recommendations.

Scope & Methodology:

Assessed critical operational environments within the hospital's IT infrastructure.

Focused on Access Control (ECC-1) and Asset Management domains.

Evaluated current security postures against NCA ECC standards.

identified Gaps:

Gap 1: Multi-Factor Authentication (MFA)

Current State: MFA is not enforced for administrative and medical staff accessing internal systems.

Compliance Requirement (NCA ECC): Mandatory MFA for all users handling sensitive health records.

Gap 2: Endpoint Patch Management

Current State: Lack of a regular automated patching schedule for hospital workstations.

Compliance Requirement (NCA ECC): Continuous vulnerability management and periodic patching.

Recommendations & Remediation Plan:

- **Enforce MFA policy across all enterprise accounts within 30 days.**
- **Implement an automated patch management tool and schedule weekly updates.**
- **Conduct awareness sessions for staff regarding secure access practices.**
